

# **SandwichWorld.Com**

## **Web Application**

---

**GitHub:** <https://github.com/SLMcCarthy/CS456-WebProj>

**Members:** Shane McCarthy

### **Project Definition:**

Everybody loves a good sandwich, however in the modern digital world no one man has taken the task to create a database of all sandwiches. Our application will focus on storing and showcasing user - submitted sandwiches - allowing other users to rate each others sandwiches through a rating system and comments. Users can proudly display their sandwiches on their profiles, with ratings for all to see. If time permits, a sandwich editor may be introduced. Allowing one to create a virtual sandwich without the need of an uploaded photo

### **Functionalities**

- Ability to upload images of ones sandwich
- Ability to give description, ingredients, and recipe for ones sandwich
- Ability to post sandwich to the homepage to be rated
- Ability to keep sandwich private
- Ability to comment and rate others sandwiches
- Ability to reply to comments on your own sandwiches

### **Target Audience:**

Those who respect the art of sandwich making and the importance of exchanging information and criticism to fellow artists (Also, users are allowed to be as humorous as possible - allowing for a satirical edge to the site)
